Checking if model residuals have temporal non-independence

To confirm temporal non-independence, extracted normalised residuals and plotted whistle proportion against each hour of diel cycle

###used acf to decide which autocorrelation method could be used (would use MA-moving average if given
acf(residuals(gam1, type="pearson"),lag=24,main="")

Then used partial autocorrelation to calculate correlation of each lag but partials out/accounts for the correlation of previous lags, as more than 50% of lags are significantly different from zero (above— line), MA (moving average) structure is needed if had time to go ahead with fixing temporal non-independence

```
